

<b>CLIMBING PLANTS</b>	all container	27
Clematis montana varities	small pink or white flowers in spring	8.00
Orientalis	small yellow bells during summer	8.00
Hedera (Ivy) in variety		8.00
Hydrangea Petiolaris	self clinging	9.00
Jasminum nudiflorum	winter flowering yellow jasmin	10.00
Lonicera (Honeysuckle)		8.00
Halliana (E)	Repeat flowering during summer yellow scented, vigorous	
periclymenum Belgica,	Early Dutch yellow, red markings scented	
Graham Thomas	Larger yellow flowers	
Serotina,	Late Dutch yellow, red markings scented	
Passiflora caerulea	blue passion flower	8.00
Pyracantha (Fire Thorn) (E)		10.00
Fructo Luteo	yellow berries	
Orange Charmer	orange berries	
Red Pillar	red berries	
Vitis colgnetiae	strong growing leaves 30cm across scarlet autumn tints	8.00
vinifera Purpurea	young leaves claret red turning purple	10.00
Indoor Grapes		
Black Hamburg	black sweet desert grape, late ripening	
Buckland Sweetwater	white desert grape. Ripens August	
Muscat of Alexandria	white grape with good flavour

	Alba- ‘Shiro Kapitan’	white	short trusses
	Okayama	violet blue	short trusses
	‘Showa Beni’	magenta pink	short trusses
floribunda	alba – ‘Shiro Noda’	white flowers	long trusses
	Black Dragon-‘Yae Kokuryu’	dark double blue	flowers
	Black Dragon (single)	‘Kokuryu’ deep blue	early flowering
	Domino – ‘Issai’	Mid-length flowers	of mid blue
	Eranthema	Mid-length	pale blue flowers
	Hocker Edge	Long	pale blue flowers
	Kimono	Striking variety	with well defined blue eye, Mid length trusses
	Kuchibeni - Peaches	and Cream	or lipstick
		Pale creamy lilac	with long trusses
	Lawrence	mid blue	longish trusses
	Loders purple	deep red purple	mid length
	Macrobotrys	Long	pale lavender trusses
	nana Richens Purple	Deep purple	blue mid trusses
	Purple Snake	Long	deep purple flowers
	Rosea -‘Honbeni’	Long	magenta pink trusses
	Rolvenden Bronze Leaved.	Striking	bronze leaves in the spring
sinensis	alba	Mid length	white flowers
	Amethyst	Deep	violet blue
	Blue Sapphire	Compact	deep blue trusses
	Caroline	compact	trusses of pale blue
	Consequa	Compact	deep blue trusses
	Rolvenden Bronze Leaved.	Striking	bronze leaves in the spring with large lilac flowers
Hybrids	x Burford	long	trusses with large individual flowers
	x Formosa	Late	flowering blue form
	x Lavender Lace	Very	long trusses, pale blue

## WISTERIA IN ORDER OF FLOWERING - APRIL / MAY

### **floribunda Kokuryu** ( Single Black Dragon)

Normally the first to open. Mid blue, probably **the purest blue** (least red in colour)..Flowers mid length set off against pale lemon leaves that open with the flowers. Unfortunately leaves look as if they have a virus later in summer. The flowers also first to fade. See also fl. Eranthema for purest blue.

### **sinensis Amethyst**

Deep violet blue flowers of mid length. Darker and with more red in colour than Kokuryu or Consequa. The smaller yellow blotch than on most wisteria giving a deeper overall colour. Flowers before leaves open but fades quickly in sunlight.

### **brachybotrys collected in the wild Okoyama**

Short rounded blooms of violet blue, similar in colour to Amethyst but set off against young bronze foliage. Flowers throughout the spring flowering period, longer than most varieties. Strong distinctive perfume

### **Brachybotrys Shiro Kapitan** (Venusta or Alba)

Short rounded blooms of pure white setoff against pale green leaves combined with along flowering period. One of the fastest wisteria to come into flower after planting.

### **sinensis 'Consequa'**

Opens before the leaves with mid length blue /purple flowers. This variety deserves its place as one of the best and most commonly planted wisteria. Mature plants will often have a fair number of flowers again in July/August

### **sinensis Blue Sapphire probable same as 'Consequa' or Prolific,**

Mid to pale blue/purple flowers with large pips and average length. Similar to sinensis Consequa but with less red in the colour.

### **sinensis Alba**

mid length flowers hang straight down coloured white with small yellow eye. Growth is lighter than other sinensis varieties. prevents the colour from fading during its long flowering period.

### **floribunda 'Domino'** (Issai)

Flowers of mid length and medium blue colour. Pips open to show yellow on a mauve background , free flowering can repeat later in summer.

### **floribunda 'Nana Richens Purple' probably same plant as Royal Purple**

Flowers mid to long in length and deep blue in colour. Individual pips do not open very much giving the appearance of deeper colour as the flower ages. A striking feature of this variety is the shiny foliage.

**Rolvenden Bronze Leaved.** Striking bronze leaves come out with the large lilac flowers. Young plants do not come into leaf until the end of June or July but after a year or two behave normally . It can be a mistake to think the plant has died over winter. A new variety with a difference.

**brachybotrys ‘Showa Beni 2**

29

This variety has the best pink colour of any of our varieties. The colour is deeper than floribunda ‘Honbeni’ (Rosea) although the flowers are shorter and more rounded.

**Floribunda Kimono** A free flowering variety with white flowers containing a striking blue centre.

**X ‘Lavender Lace’**

A variety with long flowers and large pips in the racemes giving the flowers a full and bright appearance. The pips have a yellow white centre with darker blue mauve surround

**Floribunda Eranthema** pale ‘Wedgewood Blue’ flowers of mid length. This variety rivals fl Kokuryu for being the purest blue.

**floribunda ‘Kuchibeni** (‘Peaches and Cream’)

Very long racemes with cream and white centres to the flowers surrounded by red purple, giving a distinctive mauve white appearance fading almost white. Very free flowering. Will flower quite freely late summer

**X ‘Caroline’**

This variety has short compact flowers of mid blue colour

**floribunda ‘Honbeni’** (‘Rosea’)

Very long flowers of pale magenta pink colour. Similar in appearance to ‘Kuchibeni’ but with more pink in the colour.

**floribunda ‘Hocker Edge’**

Flowers long in length and hang straight down. Similar to ‘Lavender Lace’ but open petals are darker.

**floribunda Lawrence**

Pale blue purple with large pips and long trusses

**floribunda Loders Purple**

Deep red purple flowers with mid length trusses. The individual pips are on the small side.

**floribunda Macrobotrys / ‘Multijuga’**

Pale mauve variety with the longest flowers. Flowers often over 1m in length that hang in a dainty and attractive manor.

**floribunda ‘Yae Kokuryu’** (‘Black Dragon’ or ‘Violacea Plena )

The only wisteria with double flowers. The long blooms are dark purple in bud opening lavender blue. There is a lot leaf out by the time the flowers open. On our nursery the flower truss does not all open at once with the top of the truss dyeing before the bottom is fully out.

**x formosa** mid blue and mid length flowers. Green foliage tends to appear with the flowers. Formosa is often listed as the same plant as Issai but our plant flower a lot later and produces more seed pods. It flowers very freely and look similar to Issai  
A good variety if you prefer a later flowering plant.

**Floribunda 'Shiro Noda'** ('Alba' or 'Multijuga Alba')

The last of our wisteria to flower. The very long flowers are white and start opening before the leaves. A most variety to be recommended.
